

Pharmaceutical Tanks now Manufactured at Walker Barrier Systems

Founded in 1943, Walker Stainless Equipment has over 60 years of experience in stainless steel design and fabrication at our three divisions with facilities in New Lisbon, WI, Elroy, WI and Tavares, FL. Walker Transportation provides over the road trailers for hauling dairy, juice and other liquid products. Walker Engineered Products provides tanks, vessels and silos to the food and beverage industries. Walker Barrier Systems develops world leading Containment and Isolation systems for the pharmaceutical, fine chemical, and nuclear industries.

Walker Stainless Equipment focuses on providing the food, beverage, dairy, pharmaceutical, fine chemicals, and nuclear industries with a full range of high value, high quality product built to meet and exceed our customers' most challenging applications.

Walker Barrier Systems is a leading supplier of containment and aseptic systems for the pharmaceutical, biotech and nuclear industries. Our well established product range includes isolators for containment of potent compounds, and for aseptic processing applications. Walker Barrier Systems has provided its own tray dryers as part of isolator projects. However, often in Pharmaceutical processing, tank charging is required under either an aseptic environment or for containment of potent powders. Walker Barrier Systems is happy to announce that we can now provide tanks (formerly provided by our Walker Engineered Products Division) up to 7,000 liters for the Pharmaceutical and Biotech Industries. These tanks can be part of an isolator system or stand alone. For more information, see our website at www.walkerbarrier.com.
